## 1. PREREQUISITES

### 1.1 Network Connection to TIRAMIS

Integrating partner is supposed to establish secure Virtual Private Network (VPN) connection to Tanzania Insurance Regulatory Authority Management Information System (TIRAMIS) datacenter.

### 1.2 Insurer and Third Parties Systems

Integrating institution must have a working or a complete developed system that is ready for integration with TIRAMIS. The system shall undergo several tests with TIRAMIS; and once passed, then shall be allowed to migrate to TIRAMIS production environment.

### 1.3 Digital Certificates

Integrating institution must share her public certificate(s) and obtain TIRAMIS public certificate(s) to be used in verification of all messages exchanged between their system and TIRAMIS. For the algorithm and format, please refer to Digital Signature Security section of this document. Testing certificates may be provided by TIRAMIS. These shall ONLY be used during testing sessions.

### 1.4 Message Exchange

- a. The message exchange shall use POST method of the HTTP protocol transport protocol with payload being an XML
- b. The expected HTTP method is always POST.
- c. Endpoints shall be communicated during integration process. There shall be endpoints for testing environment and others for production environment.
- d. The integrating institute may wish to use HTTPS protocol but will be required to share its SSL public certificate and all end points shall have full qualified registered domain(s)

### 1.5 Message Encoding

Supported data exchange encoding are utf-8 and utf-16

### 1.6 Special Characters

Within Xml body content all the special characters should be escaped.

Character	Description	Escaped by
&	Ampersand	&amp;
<	Less-than	&lt;
>	Greater-than	&gt;
"	Quotes	&quot;
'	Apostrophe	&apos;

## 2. MESSAGE STRUCTURE

### 2.1 Request Messages

All Request to TIRAMIS shall contain two (2) parts i.e HTTP Header and Payload.

#### 2.1.1 Request HTTP header shall contain the following parameters when sending request to TIRAMIS.

Parameter	Values/Description
<b>Content-Type</b>	Application/xml
<b>ClientCode</b>	Shall be given during the integration
<b>ClientKey</b>	Shall be given during the integration

#### 2.1.2 Request payload shall change based on service encountered. However, the general structure will be as shown below:

```
<TiraMsg>  
  <Content></Content>  
  <MsgSignature></MsgSignature>  
</TiraMsg>
```

### 2.2 Response Message

All Response to TIRAMIS shall contain two (2) parts i.e HTTP Header and Payload.

#### 2.2.1 Response HTTP header shall contain the following parameters when responding to TIRAMIS.

Parameter	Values/Description
<b>Content-Type</b>	Application/xml

#### 2.2.2 Response payload shall change based on service encountered. However, the general structure will be as shown below:

```
<TiraMsg>  
  <Content></Content>  
  <MsgSignature></MsgSignature>  
</TiraMsg>
```

### 3. DATA SUBMISSION PROCESS FLOW

- a. Insurer Information System submits Cover Note data or Endorsement data as per **respective** xml format until TIRAMIS system acknowledge receiving the request
- b. TIRAMIS system must acknowledge as per **respective xml** format receiving request from Insurer System before doing any internal processing
- c. TIRAMIS System must send final response via callbackurl provided in corresponding **respective** message as per **respective xml** format until Insurer system acknowledge receiving the final response
- d. Insurer Information System must acknowledge as per **respective xml** format receiving response from TIRAMIS System before doing any internal processing

**NOTE:**

In case Insurer Information System does not receive acknowledgement from TIRAMIS System in step b. above, it must keep retrying until acknowledgement is received. Unless there is a connectivity problem between the two systems or any other system problem hindering communication.

In case TIRAMIS System does not receive acknowledgement from Insurer Information System in step d. above, it must keep retrying until acknowledgement is received. Unless there is a connectivity problem between the two systems or any other system problem.

## 15. DIGITAL SIGNATURE SECURITY

### 16. Overview

Digital signature will be used for messages exchange between the TIRAMIS and Insurers/third party. systems

Digital signatures will also be used for file(s) sharing. File(s) must previously signed by the Participant's private key and verified using participant's Public Key.

### 17. Digital Signature

The security architecture used by the TIRAMIS is based on Public Key Infrastructure (PKI) technology in which two keys (Public and Private) are used. The keys are generated using digital certificates downloaded by the Central CA Server. PKI digital certificates are used for access control and digital signature.

### 18. Digital Signature Format

The files and message will be digitally signed using the PKCS12 standard. This provides authentication, message integrity and non-repudiation of origin. The standard describes a general syntax for data that may have cryptography applied to it, such as digital signatures and digital envelopes.

The TIRAMIS expects files or message to be digitally signed and obey the following rules:

<p>The file/message contains the actual message and the digital signature of that message in the form of</p> <pre>&lt;TiraMsg&gt;   &lt;Content&gt;&lt;/Content&gt;   &lt;Signature&gt;&lt;/Signature&gt; &lt;/TiraMsg&gt;</pre>
<p><b>&lt;Signature&gt;</b> is the electronic signature in PKCS#12 format</p>
<p>The digital signature must be <b>BASE64</b> encoded.</p>
<p>The Digital signature Algorithm used must be <b>SHA1withRSA</b></p>
<p><b>&lt;Content&gt;&lt;/Content&gt;</b> is the appropriate API message format E.g.</p> <pre>&lt;CoverNoteRefRes&gt;   &lt;ResponseId&gt;TIRA22424232355&lt;/ResponseId&gt;   &lt;RequestId&gt;NIC22424232355&lt;/RequestId&gt;   &lt;CoverNoteReferenceNumber&gt;3325253254&lt;/CoverNoteReferenceNumber&gt;   &lt;ResponseStatusCode&gt;TIRA001&lt;/ResponseStatusCode&gt;   &lt;ResponseStatusDesc&gt;Successful&lt;/ResponseStatusDesc&gt; &lt;/CoverNoteRefRes&gt; &lt;MsgSignature&gt;btrhrtigronoirengoienfionewif&lt;/MsgSignature&gt;</pre>

Therefore, after applying the digital Signature the complete message exchanged between participants and the system will be: -

<pre> &lt;TiraMsg&gt; &lt;CoverNoteRefRes&gt; &lt;ResponseId&gt;TIRA22424232355&lt;/ResponseId&gt; &lt;RequestId&gt;NIC22424232355&lt;/RequestId&gt; &lt;CoverNoteReferenceNumber&gt;3325253254&lt;/CoverNoteReferenceNumber&gt; &lt;ResponseStatusCode&gt;TIRA001&lt;/ResponseStatusCode&gt; &lt;ResponseStatusDesc&gt;Successful&lt;/ResponseStatusDesc&gt; &lt;/CoverNoteRefRes&gt; </pre>	Actual Tiramis Message
